

The Total Lift Bed™

The **Total Lift Bed** sets new standards in patient and caregivers treatment, dignity, comfort and safety.

The **Total Lift Bed** is a bed and so much more, giving many advantages over conventional beds.

The revolutionary design allows the bed to raise the user to a fully standing position and all positions in between including chair positions.

In addition to its obvious clinical benefits, the **Total Lift Bed** is the best solution for safe patient handling and safe lifting. It eliminates the need for bending and pulling and decreases the chance of care giver injury.

The Total Lift Bed is ideal for:

- Hospitals
- Nursing Homes
- Assisted Living Facilities
- Long Term Acute Care Hospitals
- Safe Patient Handling and Safe Lifting Programs
- Rehabilitation Centers
- Sports Rehabilitation Centers
- Homecare – Aging in Place
- Fall Prevention

The Total Lift Bed™

With just a press of a button you can bring the patient to any position desired.

The Patented (pending) technology of the **Total Lift Bed (TLB)** moves the **Foot Lifter™** towards the feet of the patient/user, and only after making contact will start tilting him, thus preventing any danger of sliding in bed. While the bed tilts, and upon reaching the proper angle, the **Foot Lifter™** will gradually move down so when the bed is in fully standing position the **Foot Lifter™** will be parallel to the floor, allowing the patient/user to simply walk out of bed, with or without assistance.

The patient can also be tilted for treatment, at any desired angle, for as long as needed.

The **Total Lift Bed** can come with low air-loss mattresses in any grade.

The Total Lift Bed has all possible bed and chair positions.

Some of the TLB clinical applications:

- **Early Mobility Therapy** - Hospital administrators, insurance companies and clinical practices require Early Mobility Therapy: Researches indicate that early mobility therapy is safe and important as it promotes better patient outcomes, Reduces the amount of time it takes to liberate a patient from a ventilator, raises the patient's ability to independently perform activities of daily living, uplifts mood, increases his strength and reduces the length of stay in the hospital. This makes the TLB perfect for ICU/CCU.
- **Post orthopedic surgeries** - As Hip Replacement, Spinal Surgery, Knee Replacement etc.
- **Physical Therapy** - The TLB is the only device in the world with a true "Weight Bearing Control" system, which allows the best possible physical therapy and rehabilitation.
- **Wound Care** - The TLB, when tilting the patient, reduces dramatically the amount of pressure distributed on the support surface and thus helps in pressure ulcers prevention and therapy. The TLB can come with LAL powered mattresses and gives the optimal solution for such cases.
- **Burn wounds** - The TLB can help in the complicated treatment of burn wounds, by allowing easy movement of the patient and reducing pressure from the wounded area.

The Total Lift Bed has all safety features and is FDA and CE registered, conforming with the EN/ IEC 60601-2-38 and the Assessment Guidance to Reduce Entrapment.
